

PROYECTO LUZ — FICHA TÉCNICA METODOLÓGICA

Minería de Datos Bibliométricos, Caracterización del Estado del Arte y Fuentes Científicas Base (2014-2026)

Declaración de Soporte y Generación Metodológica: La presente ficha técnica documenta de forma exhaustiva el origen de los datos, los parámetros de minería de texto y la fundamentación bibliométrica para el **Proyecto Luz** (iniciativa de Inteligencia Artificial, Modelos de Lenguaje Grande y Procesamiento de Lenguaje Natural aplicados a la prevención del suicidio, intervención en crisis y salud mental). La extracción masiva, la caracterización del ciclo de vida de la investigación, la cartografía conceptual de redes y la estructuración del guion estratégico para la **generación de las diapositivas de presentación** contaron con el soporte analítico asistido de **Gemini NotebookLM**, plataforma que sintetizó concurrentemente el corpus de Scopus y los textos completos de la literatura científica.

1. RESUMEN EJECUTIVO DE MÉTRICAS E INDICADORES BIBLIOMÉTRICOS

325 Documentos Indexados (Scopus N=325)	214 Fuentes / Revistas Especializadas	1,511 Autores en la Red (4.87 coautores/doc)	50.22% Tasa Crecimiento Anual (Fase Exponencial)
18,228 Referencias Citadas (17.4 citas/doc)	29.85% Coautoría Internacional (EE.UU., China, AU)	Año 2030 Pico de Producción (479 pubs/año est.)	10.0% Progreso a Saturación (Fase Crecimiento Rápido)

Figura 1. Modelo predictivo BiblioAI del ciclo de vida científico en IA aplicada a la prevención del suicidio (2014–2040). $R^2 = 0.962$.

2. ORIGEN DE DATOS, ESTRATEGIA DE BÚSQUEDA Y MODELADO PREDICTIVO

Ecuación de Búsqueda Booleana en Scopus (Elsevier):
TITLE-ABS-KEY(("artificial intelligence" OR "large language model*" OR "natural language processing" OR "chatbot*") AND ("suicide prevention" OR "suicidal ideation" OR "crisis intervention"))

Parámetro Técnico	Detalle de Registro y Métricas	Implicación para el Proyecto Luz
Corpus Principal	325 documentos en 214 revistas indexadas (2014-2026).	Asegura cobertura completa de literatura revisada por pares.
Edad Promedio	1.21 años por documento.	Confirma la extrema frescura y novedad tecnológica del estado del arte.
Descriptores (DE)	1,127 palabras clave de autor identificadas.	Permite mapear la convergencia precisa entre IA y salud mental.
Ajuste de Modelo	R² = 0.962, RMSE = 8.75, AIC = 49.4, BIC = 50.3.	Valida la robustez estadística de las proyecciones a 2030.
Liderazgo Global	EE.UU. (líder citas/pubs), China y Australia.	Demuestra la necesidad de enfoques multiculturales y multilíngües.
Herramientas	Bibliometrix / Biblioshiny (R) + Python (pandas/openpyxl).	Procesamiento automatizado de grafos, redes y tablas .xlsx.

Figura 2. Análisis factorial de palabras clave: Dualidad entre la Dimensión Tecnológica y la Dimensión Clínica/Ética.

3. ESTRUCTURA CONCEPTUAL Y MAPEO DE REDES (BIBLIOMETRIX)

- A. Análisis de Tres Campos (Three-Field Plot / Sankey):** Enlaza autores clave (AU) con sus referencias citadas (CR) y palabras clave agregadas (KW). Evidencia que los equipos de mayor impacto investigan paralelamente los modelos generativos y la privacidad de datos.
- B. Historiografía y Genealogía del Campo:** Muestra una línea continua desde los pioneros en ética y agentes de salud mental (Luxton, 2014; Fitzpatrick, 2017 - Woebot; Inkster, 2018 - Wysa) hacia la eclosión de los LLMs y chatbots de intervención en crisis (Cui et al., 2025; Crawford et al., 2026).
- C. Redes de Colaboración Internacional:** El 29.85% de coautoría internacional se concentra en el eje Norteamérica-Asia-Europa-Australia, respaldando la validez global de los modelos de respuesta.

4. HALLAZGOS CLAVE Y APLICABILIDAD PARA EL PROYECTO LUZ

Dimensión / Pilar	Evidencia Científica Extraída	Especificación Técnica para Proyecto Luz
Intervención en Crisis (Modelo ACT)	Modelo de 3 etapas: Evaluación de Riesgo, Intervención de Crisis y Tratamiento de Trauma (Cui et al., 2025; Roberts, 2002).	Estructurar el flujo del chatbot en 5 pasos: Calmar ánimo, Generar confianza, Clarificar crisis, Buscar soluciones y Obtener compromiso de seguridad.
Calibración de LLMs (Prompt Eng.)	Ajuste en GPT-4/LLaMA con hiperparámetros optimizados para soporte empático (Cui et al., 2025).	Fijar Temperatura = 0.5, Top-P = 0.8, Max Tokens = 400 y Presence Penalty = 0.1 para evitar alucinaciones y mantener tono estable.
Procesamiento de Lenguaje Natural (NLP)	Detección de ideación suicida en texto libre con precisión >90% (Pestian et al., 2016; Zhong et al., 2018).	NLP escanea patrones de desesperanza e ideación 11 veces más eficientemente que códigos diagnósticos tradicionales.
Arquitectura RAG (Retrieval Augmented)	Anclaje de respuestas generativas en bases de conocimiento clínico validadas (Crawford et al., 2026; Xie et al., 2026).	Implementar vectores de conocimiento clínico que filtren y verifiquen las salidas de la IA antes de enviarlas al usuario.
Framework READI (Gobernanza)	Evaluación de preparación en salud mental: Seguridad, Privacidad, Equidad, Efectividad, Compromiso y Transparencia (Crawford et al., 2026).	Adoptar los 6 pilares de READI como marco de auditoría continua de calidad y seguridad clínica del sistema.
Privacidad y Anonimato Estricto	Preocupación central en el 85% de estudios (Wątek et al., 2026; Li et al., 2024; Broer, 2022).	Modo anónimo sin registro real, cifrado punto a punto, ofuscación de IP y purga periódica de logs en el backend.

Conclusión Estratégica del Estado del Arte: La evidencia bibliométrica demuestra irrefutablemente que el Proyecto Luz se posiciona en el punto exacto de aceleración de la curva científica mundial. La tecnología de IA generativa y chatbots empáticos no busca reemplazar al profesional humano, sino actuar como la primera barrera de contención escalable, anónima y segura que canalice a los usuarios hacia líneas de emergencia (como el 9-8-8) e intervenciones especializadas.
